

WASHER TANK

A simple to install washing system for SSL PTZ units

The optional self-priming washer tank system is a vital addition to any CCTV installation where the environment is susceptible to any form of dirt or airborne contaminants.

Cameras using an auto-focus function can encounter problems with dirty screens as the cameras will constantly try and focus on a speck of dirt on the screen. This will ultimately lead the lens to fail as it wears itself out. By using a washing system you can ensure that the camera is only focusing on what it should be, not an irritating speck of dirt.

The unique design of the WA series washer overcomes one of the classic problems associated with CCTV washers; refilling. By having the water reservoir and pump assembly connected to the power supply via a high-quality connector you can simply unplug the bottle and take it to the water source for refilling. This can save hours of time on a perimeter CCTV system where previously, another bottle would have had to be taken to the bottle. This is a sensible solution for a common problem.

Key features:

- 5 litre reservoir capacity
- Protects camera image quality
- Reduces camera maintenance intervals
- Extends lens life
- Simple installation
- Self-priming
- Control via analogue or IP systems
- Optional RS485 control
- Suitable for corrosive environments
- Capable of pumping 12m vertically
- Supplied with hose and washer jet
- Low water alarm (option)

Specifications

| | |
|-----------------------------|----------------------------------|
| Reservoir capacity (litres) | 5 (10 & 25L Options) |
| Head pumping height | 12 meters |
| Power Consumption (max) | 60 Watts |
| Voltage | 24 vAC (230vAC options) |
| Construction | 316L grade stainless steel frame |
| Connection (Power in) | Screw Terminal |
| Connection (Pump / Float) | Multipole plug/socket |
| Control / Operation | Switch Power |
| Environmental rating | BS.EN60529 Level IP66 |
| Operating temperature | -5°C ~ +55°C |
